Editing the Cobalt Cube datasheet

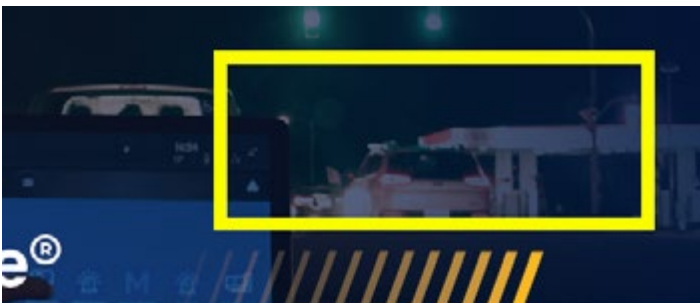

November 2023

Before you begin:

1. Please ensure that you have installed our Campton font family on your device. Available to download in the Sales & Marketing assets area of our Cobalt Cube knowledgebase.
2. You will need the PDF editing tool Adobe Acrobat to perform these modifications. If you don't have this, it is available to download for free here.

Cobalt Cube Datasheet (Screen Version)

1. Click the top right corner of the first page in the area indicated in the screenshot below and a dialog box will appear where you can upload your brand logo.

2. For best results, we recommend uploading an RGB version of your logo in transparent .PNG format.

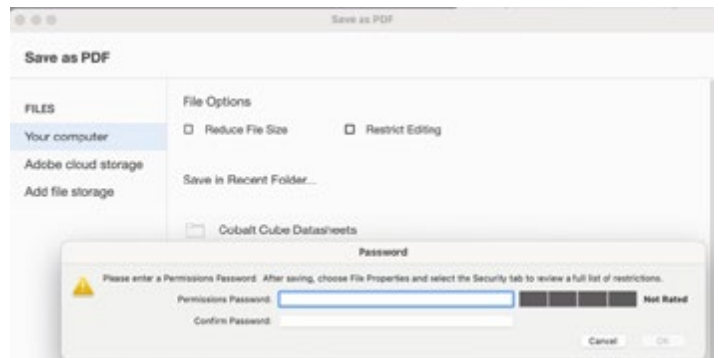

3. On the second page at the bottom, there are 6 invisible fields for adding your company contact details and logo again, as illustrated in the below screenshot. The font has been pre-formatted.

4. Please fill the text fields in the following order:

- a. Your company name
- b. Your primary contact name
- c. Your primary email address
- d. Your primary telephone number
- e. Your website

5. Once you've filled in the required fields, save as a separate document and check the "Restrict editing" box. This will prevent anyone from making accidental changes down the line.

Cobalt Cube Datasheet (Print Version)

1. The print version has been pre-formatted with crop marks for printing.
2. Please follow the exact same steps as detailed above in the screen version, except for your logo file type.
3. For print, you should choose a CMYK version of your logo, in a transparent .PNG format.

Please reach out to the VNC Automotive marketing department if you have any issues with formatting the datasheets. We'll be happy to assist you.
